Von Gary Marchionini : **Information Seeking in Electronic Environments (Cambridge Series on Human-Computer Interaction)** before purchasing it in order to gage whether or not it would be worth my time, and all praised Information Seeking in Electronic Environments (Cambridge Series on Human-Computer Interaction):

Kundenrezensionen Hilfreichste Kundenrezensionen 0 von 0 Kunden fanden die folgende Rezension hilfreich.

Informationssuche im Online-Zeitalter Von Ein Kunde Garry Marchionini versteht es in seinem Buch, das Thema Informationssuche in elektronischen Medien verständlich und prägnant zu behandeln. In 9 gut untergliederten Kapiteln wird der Leser von den Grundlagen der Informationswissenschaften in leicht nachvollziehbaren Schritten über die Suchstrategien zu den Anwendungsgebieten des Informationsdesigns geführt. Alles in allem ein gut zu lesendes Buch mit umfassendem Index und ausführlicher Bibliographie. Leider ist das letzte Kapitel, Future Directions and conclusions, nicht gerade visionär gehalten und zudem schon von der Gegenwart nihilisiert worden...

Kurzbeschreibung Significant amounts of our time and energy are devoted to creating, managing, and avoiding information. Computers and telecommunications technology have extended our regard for information and are driving changes in how we learn, work, and play. One result of these developments is that skills and strategies for storing and retrieving information have become more essential and more pervasive in our culture. This book considers how electronic technologies have changed these skills and strategies and augmented the fundamental human activity of information seeking. The author makes a case for creating new interface designs that allow the information seeker to choose what strategy to apply according to their immediate needs. Such systems may be designed by providing information seekers with alternative interface mechanisms for displaying and manipulating multiple levels of representation for information objects. Information Seeking in Electronic Environments is essential reading for researchers and graduate students in information science, human-computer interaction, and education, as well as for designers of information retrieval systems and interfaces for digital libraries and archives. Pressestimmen 'Marchionini has drawn together a number of important threads from the field of human-computer interaction. This is a scholarly work which contains a considerable depth of discussion it will certainly repay careful study.' Managing Information über das Produkt Information Seeking in Electronic Environments describes how the strategies we use to locate information have begun to change as a result of computers and telecommunications technology. Accessible to students and to the perspicacious citizen who wishes to understand how technology has begun to influence life in the information society.
