Help with Sun's Free Compiler  
Von Ein Kunde  
I have a working knowledge of both C and C++ programming languages through my studies of engineering. Wanting to learn JAVA as it seems to be the up and coming language desired by potential employers, I have tried many other books. Though these books seemed better than this book for first time users, they didn't give much help in using the free JAVA compiler JDK1.2 offered by Sun Microsystems. This including manuals published by Sun itself. I stumbled upon this book costing 1/3 to 1/4 the cost of the other manuals and was impressed at the help it gives in using JDK1.2. I would recommend this book to those for if nothing else but to get JDK1.2 to run correctly. If you're just beginning programming though, it may be too fast and brief.

As another reviewer has pointed out, there's a lot of help in setting up the jdk, but be aware that the information is given only for Windows. The basics of the language are covered well, but you should have your textbook handy. There are a few mistakes (not mistakes really, but the author didn't want to bring in all the complexities). As a college text, I was looking for some more math based examples, but there aren't too many. The ones he does give don't use adequate formatting of the results. For example, the results for a particular problem (getting the values of  $\sin(x)$ ) are given to 16 decimal places or so. But the exercises themselves are great for practicing, which will surely come in useful.

The thing you have to keep in mind is that it is designed for students. It concentrates on the basics of the language -- flow control, variables, etc. It has great exercises. But it doesn't really focus on GUI design. I found it invaluable for prepping for the Cert exam however. And, it is very cheap.
