Great book on WW2 technologyVon Tom Gundtofte-BruunThis book is a treasure.It contains a narrative of the step-by-step escalation on both sides during the war.How someone starts out with an idea and builds some gadget. The enemy gets on to it through espionage, downed planes, prisoners and plain thinking and develops a countermeasure. Thus the product is changed/adapted, like changing frequencies. The other side is puzzled, what happened?, gets on to the change and revamps the countermeasure.All this in an incredible pace - during a war funds and resources are (sometimes) easier to get, no one bothers about CE certifications etc. If it works - use it!The book covers topics like RADAR, navigational aids (which developed into DECCA LORAN, for those of old enough to understand those terms), convoys submarines, Enigma and airplanes.Great book!Unfortunately the original BBC series doesn't seem

available, neither on DVD nor on the Internet./Tom G-B

KurzbeschreibungOriginally a TV tie-in expanded from the BBC television series, the book covers the behind-the-scenes aspects of the fight by the 'back room' scientists and technicians of WW2, including the battles against the Luftwaffe navigational beams, the V-1 and V-2 flying bombs, the development of radar, the battle against the u-boats, countering the magnetic mine, and the breaking of the codes produced by the Enigma machines.
